

PRODUCT BRIEF

Venio ECA

A Venio Systems resource for smarter, faster Early Case Assessment

Key Benefits

Reduce and Manage Risk

- Prevent confidential data exposure
- Securely share relevant data with your trusted partners

Protect Reputation and Business Interests

- Enjoy peace of mind with defensible deletion
- Make strategic decisions earlier in the case lifecycle

Reduce Data and Resource Overhead

- Reduce the time and expense of sending, managing, processing, and reviewing large datasets
- Reduce overall storage footprint compared to full-fledged processing solutions

Control the Cost of eDiscovery

- Cut costs by up to 70% when sending data out for processing and review
- Cut the time of the litigation by up to 50%

Reduce Risk and Make Your Discovery 10x Faster with Venio ECA

Handling eDiscovery through external partners has long been the standard for corporate legal teams. But as data volumes explode and new sources like chat, collaboration, and cloud tools multiply, this approach now introduces growing risks. From data leakage to spiraling costs and avoidable delays, every extra handoff can compromise both efficiency and defensibility.

Venio ECA changes that.

Built for eDiscovery directors at large and mid-sized corporations, it's designed to bring visibility, speed, and control back in-house. Venio ECA enables teams to dramatically cut the volume of data sent to external partners by as much as 90% through powerful analytics and a highly scalable architecture.

Unlike conventional ECA tools, Venio doesn't tie you to a specific data framework or vendor ecosystem. Its lightweight, flexible design lets you securely upload, process, and share data with third parties on your own terms, all while maintaining total control over sensitive information.

Gain instant clarity from your data.

Venio ECA delivers interactive, customizable widgets and layouts that provide immediate insight into your datasets. Rapidly analyze and cull irrelevant material, sample data to confirm collection completeness, and visualize communication flows to uncover key connections. Using tools like the Interactive Timeline and Social Network Diagram, you can identify custodians, potential alias addresses, and time gaps, helping you see the bigger picture before diving into the details.

Whether deployed on-premise for maximum security or in the cloud for flexibility, Venio ECA empowers your team to make faster, more defensible decisions without expanding your storage footprint or sacrificing control.

Key Features

Extract Metadata and 'In-Place' Indexing of Data with a Small Footprint

Venio ECA is built to support in-place indexing, allowing data to stay right where it is—without unnecessary duplication. This design not only saves storage space but also minimizes your overall data footprint. The result? Lower infrastructure costs and a faster, cleaner workflow that keeps your data under control.

Immediate Access to Metadata and Index Texts for Investigation & Review

When time is critical, immediate access makes all the difference. Venio ECA gives you real-time access to metadata and index texts, enabling investigations to begin the moment data is ingested. Early analysis empowers your team to make informed strategic decisions, identify potential risks, and act decisively before problems escalate.

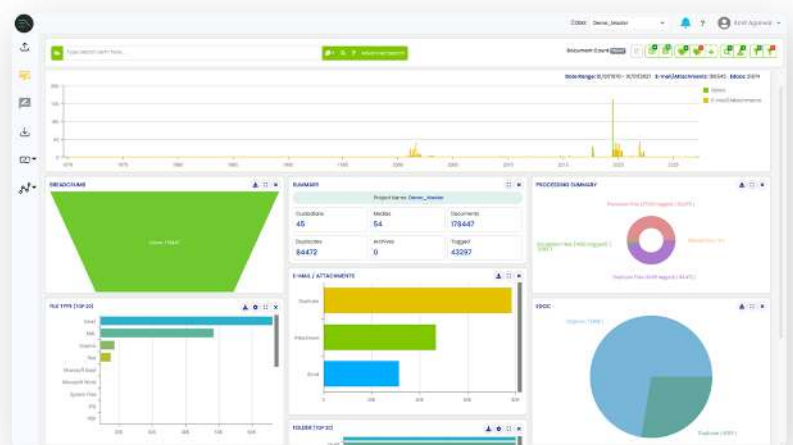

Proactive insights also help you detect and remove sensitive business, PII, or PHI data early, protecting your organization from exposure and reputational harm.

Powerful Analysis and Reporting Tools

Once your data is indexed, Venio ECA puts intelligence at your fingertips. With built-in visual timelines, email communication mapping, and social network diagrams, you can see relationships, patterns, and gaps instantly. Duplicates and irrelevant system data can be filtered out, letting your team focus only on what truly matters.

Smart features like email thread views highlight missing or deleted content, while logical tagging and auto-collection make ECA workflows more efficient. Native Venio reports provide a clear snapshot of data volume, custodian activity, and file types, helping you make quick, defensible decisions about case relevance and next steps.

Behind it all, the Venio AI engine removes repetitive tasks through intelligent, customized workflows. It surfaces the most relevant data, streamlining your analysis and amplifying team productivity.

Search and Review Made Simple

Effective discovery starts with a powerful search. Venio ECA enables you to search by keywords or metadata, isolate irrelevant files, and flag what truly matters fast. Interactive analytics give you actionable insight before the full review even begins. This pre-review culling dramatically reduces the data volume (and costs) carried forward into linear review, saving time and resources.

Seamless Production and Integration

When relevant data is ready, Venio ECA ensures a seamless handoff to the next stage of eDiscovery. Data can be exported effortlessly to VenioOne or Venio Cloud without extra work or reprocessing. With secure upload options and open compatibility, Venio ECA doesn't lock you into any specific framework, offering complete flexibility when sharing data with trusted partners.

Built for Scale and Flexibility

Venio ECA grows with your data. Its horizontal and vertical scalability ensure consistent performance, no matter the data size. Deploy it on-premise, in a private cloud, or through Venio Cloud as a managed service, whatever fits your infrastructure best.
