

PRODUCT BRIEF

# Venio Review

The Complete Review Platform for Modern Legal Teams

## Key Benefits

### Highly Cost-Effective Review Platform

- Flexible licensing: No user-based cost
- No third party add-ons required
- On-premises, cloud, or hybrid delivery

### Faster, More Accurate Reviews

- Powerful Search, Advanced filter and Query Builder to find what matters most
- TAR/CAL reduce data to be reviewed up to 90%
- Auto-collection for tiered reviews

### High-Quality, Risk-Free Review and Production

- PII/PHI Entity Identification reduces risk
- Native Excel Redaction protects financial data
- Secure data sharing and collaboration built-in

## Modern Review Built for Scale, Security, and Simplicity

Venio Review gives legal teams a fast, intuitive, and reliable platform to review millions of documents and quickly surface the information that matters most. It's designed for teams who need speed and accuracy, without the headaches of rigid licensing, expensive review-only tools, or complex third-party integrations.

Unlike traditional platforms that slow you down with manual data transfers or restrictive deployment choices, Venio Review offers a streamlined, secure environment built to keep sensitive information protected and workflows efficient. You get the power to import data from any processing tool, run rapid searches, tag documents, apply native redactions, extract entities, and safeguard PII/PHI and other confidential content.

Venio Review adapts to how your organization works. Deploy it on-premises, in your private cloud, or as a fully managed SaaS service. For VenioOne and Venio Cloud users, everything is already built in, no extra tools, no manual imports, no friction.

When deployed in the cloud, Venio Review takes full advantage of enterprise-grade protection, adding an extra security layer on top of AWS's proven infrastructure to ensure your most sensitive data stays safe behind advanced firewalls and multi-layered controls.

With Venio Review, you can onboard new cases and clients in minutes, without investing in expensive infrastructure or juggling unnecessary licenses. It's modern review made truly effortless.

## Key Features

### Single Solution to Your Review Needs

Venio Review is built as a true all-in-one platform, purpose-designed to support diverse case needs without relying on any third-party integrations.

With built-in batched review, email threading, and native viewers for social media, multimedia, PDFs, and transcripts, your team gets a full-featured review environment that's ready to use from day one. Everything you need is already inside the platform - no add-ons, no extra tools, no workarounds.

## Fast, Intuitive Search to Find Important Information Quickly

Venio Review offers fast, powerful search capabilities supported by an easy-to-use Advanced Query Builder, making it simple to generate even the most complex queries.

Smart filters give immediate visibility into the dataset and help refine searches with precision. Features like Saved Searches, Search History, and Dynamic Folders keep your team moving quickly and confidently.

The intuitive interface, paired with detailed user guides and available training, ensures reviewers can work efficiently without constant project management support.

The screenshot displays the Venio Review software interface. On the left, there's a sidebar with navigation links for 'Default Document View', 'Case name - TOA-DEMO', and various document types like Email, Edoc, Image, SMS, Native, Media, and No Text. Below this is a 'View Search' section with a condition dropdown and a search button. The main area shows a search results grid with columns: #, Tag Color, Document Family, Internal File Id, Control Number, Custodian Name, Hash Value, Family Internal File Id, and Group. The results list 18 items, each with a checkbox and a preview icon. The grid includes sorting and filtering options at the top. A status bar at the bottom indicates '50 of 18740' items found.

## Native Redaction and Entity Extraction Reduces Risks

Venio Review eliminates common redaction risks with native Excel redaction, helping protect sensitive financial data while saving hours of manual work.

Because redactions can be applied directly to native files, reviewers no longer need to handle documents outside the platform or work with messy text versions.

Built-in entity extraction automatically identifies and isolates PII, PHI, and other business-critical details, reducing exposure risks and keeping sensitive information out of the wrong hands.

## AI-Powered to Eliminate Unnecessary Work

As reviewers begin their work, Venio Review's CAL (Continuous Active Learning) capability applies machine learning to reduce case data by up to 90%, surfacing the documents that matter most.

Email thread views help quickly identify missing or deleted content, while the Social Network Diagram offers a clear, interactive visualization of communication patterns with the ability to drill into conversations.

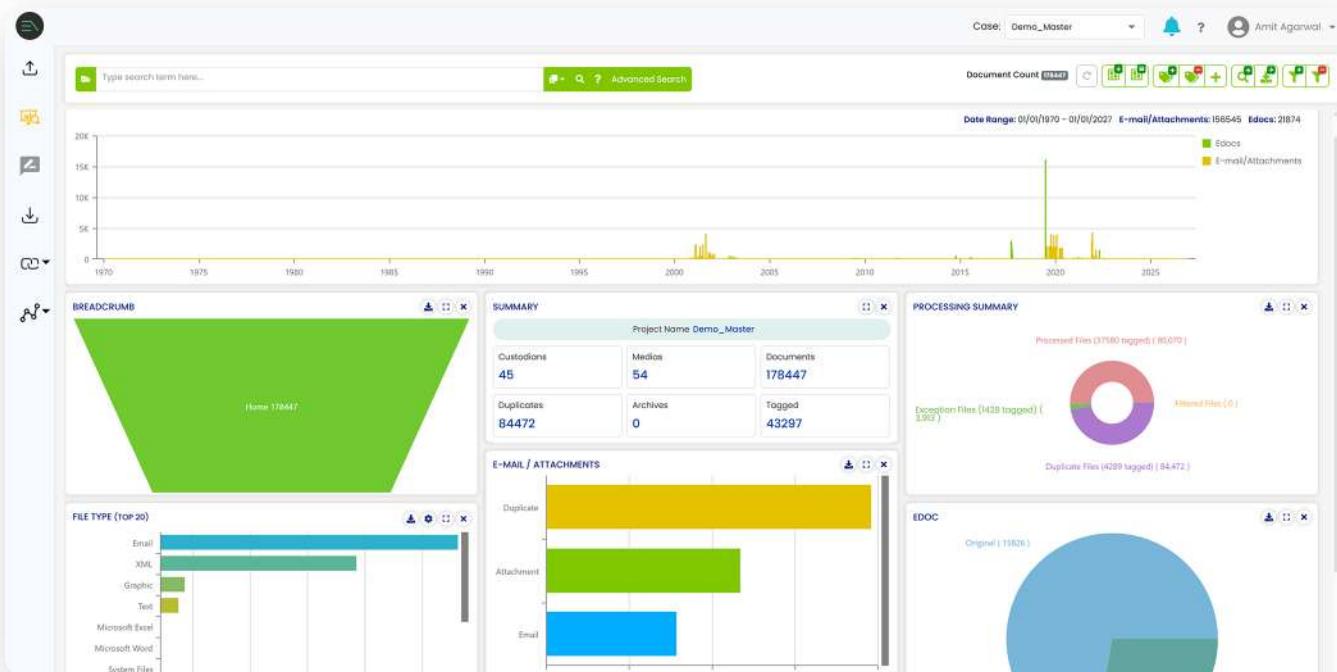

Auto-collection supports tiered reviews, and logical tagging makes teams more effective and efficient throughout the process.

## Interactive Analytics for Actionable Insights

Venio Review's analytics dramatically reduce costs by minimizing the volume of data that enters review and equipping teams with powerful, built-in analysis tools.

Users can gain immediate insights and accelerate ECA and culling through customizable widgets and layouts. Sampling tools help confirm collection completeness and ensure strategies are working as expected.

You can visualize communication flows, merge duplicate email addresses, and uncover key custodians, alias accounts, or time gaps using the interactive Timeline and Social Network Diagram, a spider-web view of your email ecosystem.

## Customizable UI for an Easier Review Experience

Venio Review's interface is highly customizable, supporting templated review sets and screen layouts tailored to different case types, roles, and tasks.

This reduces setup time for project managers and gives reviewers a more responsive, faster doc-to-doc experience. Ultimately, these efficiencies translate into stronger investigative and trial strategies with better outcomes.

## Flexible Licensing and Deployment Options to Reduce Costs

Venio Review supports cases housed across different environments, giving you the freedom to choose where your data resides: on-premises, in your cloud, or in a hybrid model.

It's flexible, subscription-based licensing avoids per-user fees and allows you to scale based on your immediate needs. With project-based payment options, Venio Review grows as your business grows, without locking you into rigid or expensive commitments.
